

GOUTHAM KISHORE KRISHNAMOORTHY

Senior SDET Engineer

+1 (682) 376-8423 | gouthamkishore2711@gmail.com

PROFESSIONAL SUMMARY

- Senior SDET with **7+ years** of hands-on experience across the full **SDLC** and **STLC**, from requirements analysis and test planning through release sign-off, spanning web, API, microservices, and **GenAI**-powered applications.
- Strong foundation in manual testing disciplines: writing detailed **test plans**, **exploratory testing**, risk-based prioritization, defect lifecycle management, and **UAT** coordination across cross-functional teams.
- Proven ability to build and scale automation frameworks from scratch using **Java** and **Python**, covering UI automation with **Selenium** and **Playwright**, service automation with **REST Assured** and Postman, and BDD frameworks using **Cucumber** and Gherkin.
- Hands-on experience in **GenAI testing**, designing evaluation strategies for **LLM** outputs, **RAG pipelines**, and Copilot-style features validating response accuracy, retrieval quality, grounding, and safety using **LLM-as-judge** evaluation patterns integrated into CI/CD.
- Developed **AI-powered test generation** workflows using **OpenAI** and **Claude APIs** to synthesize API, UI, and data-driven test cases, reducing manual test design effort without sacrificing coverage depth.
- Deep experience in service and API test automation: validating **RESTful** and **SOAP** services for schema correctness, auth flows (**OAuth 2.0**, **JWT**), pagination, error handling, and edge-case contract behavior using **REST Assured**, Postman, and ReadyAPI.
- Skilled in designing clean, maintainable automation architectures using **Page Object Model**, **Data-Driven**, and **Keyword-Driven** patterns, with emphasis on long-term reusability, low flakiness, and fast onboarding for new team members.
- Solid **Python** skills applied across test scripting, data validation pipelines, **LLM evaluation** harnesses, and automation utility development using **PyTest** and Requests libraries.
- Comfortable owning the test strategy end-to-end: identifying what to automate vs. what to test manually, setting coverage targets, tracking metrics, and communicating quality signals to engineering and product leadership.
- Experienced integrating test suites into **CI/CD pipelines** using **Jenkins**, **GitHub Actions**, and **Azure DevOps** containerized test execution via **Docker** and **Kubernetes** cloud infrastructure validation on **AWS** (EKS, Lambda, CloudWatch, S3).
- Strong in cross-browser and cross-platform test execution using **Selenium Grid** and **BrowserStack** performance and load testing using **JMeter** and **BlazeMeter**.
- Active **Agile** practitioner participates in sprint planning, grooming, stand-ups, and retrospectives collaborates closely with developers, product owners, and BAs to clarify acceptance criteria and align test coverage with business intent.

TECHNICAL SKILLS

Languages	Java (8/11/18), Python, JavaScript, TypeScript, SQL, Groovy, Shell Scripting
GenAI & LLM Testing	OpenAI API, Claude API, LLM-as-Judge Evaluation, RAG Pipeline Validation, Prompt Testing, AI Test Generation
UI Automation	Selenium WebDriver, Playwright, Cypress, Protractor, TestCafe, Appium (Android & iOS)
Service/API Testing	REST Assured, Postman, SOAP UI, ReadyAPI, WireMock, Newman CLI, Swagger
Frameworks & Patterns	TestNG, JUnit, Cucumber (BDD), Gherkin, Page Object Model (POM), Data-Driven, Keyword-Driven, Hybrid
Manual Testing	Test Planning, STLC/SDLC, Risk-Based Testing, Exploratory Testing, UAT, Smoke/Regression, Defect Triage
Performance Testing	JMeter, BlazeMeter, LoadRunner, Gatling
CI/CD & DevOps	Jenkins, GitHub Actions, Azure DevOps, CircleCI, Maven, Gradle, Docker, Kubernetes
Cloud & Monitoring	AWS (EKS, ECS, Lambda, CloudWatch, S3, CloudFormation), Splunk, Allure, Extent Reports

Databases	Oracle, PostgreSQL, MySQL, MongoDB, SQL Server
Version Control	Git, GitHub, GitLab, Bitbucket, SVN
Test Management	JIRA, Azure DevOps, HP ALM/Quality Center, TestRail, Zephyr, Xray
Browsers & Platforms	Chrome, Firefox, Edge, Safari, Opera -- Windows, macOS, Linux, iOS, Android

PROFESSIONAL EXPERIENCE

Sr. SDET Engineer

February 2024 - Present

Client: **Oracle, Dallas, TX**

Manual Testing & Quality Strategy

- Partnered with product owners and BAs from sprint zero to define test scope, acceptance criteria, and risk coverage areas before any automation work began designed and maintained detailed **test plans**, test cases, and execution summaries in **JIRA** aligned to each release.
- Performed structured **exploratory testing** across enterprise cloud workflows, covering edge cases in provisioning flows, billing logic, user management, and post-deployment handling, surfacing defects that scripted tests routinely miss.
- Led **defect triage** sessions with development leads, maintaining clear reproduction steps, screenshots, and trace logs for every reported issue tracked defect aging and drove resolution timelines to protect release commitments.
- Coordinated **UAT** cycles with internal business stakeholders, preparing test packages, managing execution tracking, and consolidating sign-off documentation for quarterly platform releases.
- Owned **regression coverage** planning by categorizing test cases by priority and risk, making deliberate decisions about what to automate vs. keep as manual verification, and maintaining a living traceability matrix across features.

GenAI Testing

- Designed end-to-end test strategies for **GenAI** features on Oracle cloud products, including **LLM**-powered document summarization, AI-assisted configuration tools, and intelligent recommendation services.
- Built **LLM-as-judge** evaluation harnesses in Python using the **Claude** and **OpenAI APIs**, scoring model outputs for answer relevance, factual grounding, safety, and tone consistency against curated golden datasets integrated these as automated quality gates in **CI/CD**.
- Collaborated with data scientists and ML engineers to define ground-truth corpora, synthetic test sets, and A/B regression baselines for **RAG**-powered search features validated retrieval quality, context faithfulness, and response coherence across enterprise product and policy document domains.
- Implemented structured JSON logging and distributed tracing for LLM request-response cycles (inputs, retrieved context, tool calls, eval scores) using **CloudWatch** and **Splunk**, enabling root-cause analysis for GenAI regressions in production.
- Developed **AI-assisted test generation** scripts that used LLM APIs to synthesize new API and UI test cases from feature specs, expanding coverage at scale without linear growth in manual authoring effort.

Java Service & API Automation

- Designed and implemented robust **UI** and **API test automation** frameworks using **Java**, **Selenium WebDriver**, **Playwright**, and **REST Assured**, validating high-impact workflows across customer-facing portals and internal operational tools.
- Designed and maintained a **Spring Boot**-aware microservices test framework using **REST Assured** and **TestNG**, covering payload validation, schema contracts, **OAuth 2.0** token flows, pagination, and error-path scenarios across core Oracle cloud APIs.
- Validated **Kafka**-driven workflows by verifying consumer-group offsets, message ordering by key, retry handling, DLQ reprocessing, and lag behavior, ensuring downstream services received and processed events correctly under both normal and failure conditions.
- Implemented API mocking with **WireMock** to decouple integration testing from live downstream services enabled early-stage contract testing during feature development before environments were stable.
- Built reusable Java utility libraries for test data seeding, teardown, and state reset using SQL scripts and REST-based admin APIs, ensuring consistent, deterministic test state across automated and exploratory cycles.

- Enhanced test reporting and traceability by implementing **Allure Reports** with **Jenkins** integration built customized dashboards with trend analysis, flaky test identification, and auto-assignment of failed runs.
- Participated in peer code reviews and framework refactoring efforts contributed to cross-team test architecture decisions involving test data abstraction layers, test suite parallelization, and framework modularization.
- Designed and executed performance smoke tests using **JMeter** for critical backend APIs, identifying high-latency operations and collaborating with engineering teams to optimize response times.
- Worked closely with **DevOps** and release teams to enforce test gates on pull requests and pre-prod environments, ensuring zero-critical-defect releases and compliance with internal QA governance standards.

UI Automation

- Designed and maintained a **Playwright**-based UI automation suite in Java and TypeScript, implementing locator-first strategies, deterministic waits, screenshot/trace artifacts, and retry controls to keep CI execution stable.
- Implemented cross-browser parallel test execution via **Selenium Grid** and **BrowserStack** across Chrome, Firefox, and Safari integrated nightly regression runs into **Jenkins** pipelines with **Allure** report publishing and failure auto-triage.
- Validated auth and role-based UI behavior using Playwright session/storage state management, covering multi-user workflows, permission-gated controls, and cookie/session edge cases.
- Built and maintained **Cucumber BDD** scenarios aligned to product acceptance criteria worked directly with BAs and product owners to keep **Gherkin** feature files readable and business-accurate across sprints.
- Led shift-left initiatives by creating Git pre-commit hooks, static test scaffolding, and service mock integrations that embedded quality checks directly in developer workflows, reducing bug leakage into formal test cycles by over **40%**.
- Integrated test automation into **GitHub Actions** CI/CD workflows using containerized environments via **Docker** ensured isolated, repeatable test runs in QA and staging environments with automated teardown and artifact storage.
- Mentored junior SDETs on automation framework design, Playwright advanced usage, and CI/CD integration standards conducted bi-weekly framework architecture reviews with the broader QA chapter.

Environment: Java 11/18, Python, TypeScript, Selenium WebDriver, Playwright, Cucumber (BDD), TestNG, JUnit, REST Assured, Postman, WireMock, SOAP UI, OpenAI API, Claude API, LLM-as-Judge (Python), RAG Validation, Spring Boot Microservices, Apache Kafka, AWS (EKS, Lambda, CloudWatch, S3), Docker, Kubernetes, Jenkins, GitHub Actions, Maven, Git, Allure, Splunk, JIRA, BrowserStack, Chrome, Firefox, Safari

SDET Engineer

September 2021 - December 2023

Client: Citi Bank, Irving, TX

- Participated in full **SDLC** and **STLC** from requirements through release, analyzing business requirements, writing test plans and test cases, executing structured manual test cycles, and maintaining defect and execution reports in **JIRA** and **Azure DevOps**.
- Built and maintained a **Java + Selenium WebDriver + TestNG** automation framework using the **Page Object Model** and Keyword-Driven patterns, supporting multi-environment parallel regression execution across Chrome, Firefox, Edge, and Safari via **Selenium Grid**.
- Developed end-to-end test automation frameworks for enterprise banking and customer management applications using **Java**, **Selenium**, and **REST Assured** validated frontend, backend, and third-party integrations across multiple environments.
- Developed end-to-end UI automation coverage using **Playwright** for Citi's modern web applications implemented a **BDD** framework with **Cucumber** and **Gherkin**, enabling business-readable test scenarios co-authored with product and BA teams.
- Automated **REST** and **SOAP** API test suites using **REST Assured**, Postman, and SOAP UI, validating request/response payloads, OAuth/token-based auth, pagination, status codes, and integration contract behavior across banking and payment backend services.
- Automated **REST API** test scenarios using **Postman** and integrated them into CI pipelines with **Newman CLI**, enabling seamless API regression checks post-deployment in QA and UAT environments.
- Designed and implemented **data-driven** test frameworks with externalized test data using **Apache POI** and JSON sources, supporting multiple user roles and negative test paths across functional areas.
- Wrote **Python** automation scripts for data validation, backend pipeline verification, and test utility tooling using **PyTest** and Requests, particularly for transaction validation, ETL output checks, and data integrity across analytics-style endpoints.

- Created performance and load tests using **JMeter** and **BlazeMeter** for critical payment APIs and reporting queries, validating latency SLAs and throughput under simulated peak traffic.
- Validated **Spring Boot microservices** on **AWS EKS**, including startup behavior, environment-specific configs, readiness/liveness probe behavior, HPA scaling events, and service-to-service communication stability during rollouts.
- Integrated test automation with **Jenkins** and **GitLab CI/CD** pipelines configured parallel test execution, build triggers, and report archiving for both feature and release branches.
- Used Playwright's API-driven setup and teardown to create users, seed test data, and manage authenticated session state, significantly reducing UI-heavy preconditions and improving test isolation.
- Supported containerized test environments using **Docker** and **Kubernetes** for pod lifecycle validation, deployment verification, and environment consistency across QA and staging.
- Developed reusable test libraries and **Page Object Models** for common UI components such as modal windows, dynamic tables, and file uploads ensured maintainability across test modules.
- Created detailed defect logs with steps to reproduce, screenshots, and log traces in **Jira** partnered with development teams to triage failures, retest fixes, and validate root cause resolutions.
- Generated and analyzed Playwright HTML reports and trace artifacts for root-cause analysis of CI failures improved test stability by systematically eliminating flaky failures tied to async behavior and dynamic DOM updates.
- Participated in **Agile** ceremonies across two-week sprints contributed to story grooming by flagging testability concerns early, provided acceptance criteria feedback, and maintained velocity metrics for QA tasks in the team backlog.

Environment: Java 8/11, Python (PyTest, Requests), Selenium WebDriver, Playwright, TestNG, JUnit, Cucumber (BDD), Gherkin, POM, Selenium Grid, REST Assured, Postman, Newman CLI, SOAP UI, Apache POI, SQL, JMeter, BlazeMeter, Jenkins, GitLab CI/CD, Azure DevOps, CircleCI, Maven, Git, GitHub, Docker, Kubernetes, AWS (EKS, ECS, Lambda, CloudFormation, CloudWatch), Spring Boot, OAuth, JIRA, BrowserStack, Chrome, Firefox, Edge, Safari, Windows, Linux

QA Automation Engineer

January 2019 - August 2021

Client: **Zoho, Chennai, India**

- Involved in all phases of the testing lifecycle, from translating functional requirements into test cases and test plans through execution, defect reporting, and release sign-off using **HP Quality Center** and **JIRA**.
- Performed manual **functional**, **regression**, and **exploratory testing** across Zoho's SaaS product suite maintained structured test repositories, tracked defect trends, and owned test execution summaries for sprint demos.
- Developed automated test frameworks using **Java**, **Selenium**, and **TestNG** for web-based enterprise applications across CRM and productivity domains covered smoke, regression, and system integration test cases.
- Developed a **Java + Selenium WebDriver + JUnit** automation framework with a JDBC-backed **data-driven** layer, enabling parameterized test execution across multiple product modules and user profiles.
- Built **Python** automation scripts using **PyTest** and **Requests** for backend API validation, data transformation verification, and test data generation, particularly useful for testing batch processing jobs and data sync workflows.
- Authored end-to-end **API test suites** using **REST Assured** and JSON schema validators, validating internal service contracts and external third-party API integrations.
- Automated **REST** and **SOAP** API tests using **SOAP UI** and **REST Assured**, covering data integrity, response accuracy, auth behavior, and error handling for Zoho's CRM, document management, and customer profile services.
- Designed **keyword-driven** testing utilities using **Apache POI** to enable non-technical team members to trigger automated tests with minimal scripting knowledge.
- Developed **BDD**-style test scenarios using **Cucumber** and **Gherkin**, co-authored with business analysts to maintain plain-language coverage of acceptance criteria across functional areas.
- Practiced in-sprint testing alongside developers by conducting desk checks, early feature validation, and defect root-cause analysis before code merged to shared environments, consistently catching issues before formal QA cycles.
- Integrated automation runs into **Jenkins** CI/CD pipelines for scheduled regression execution and release candidate validation configured email alerts, test history tracking, and rerun policies for flaky test management.
- Conducted cross-browser and cross-platform validations using **Selenium Grid** and **Docker**-based test containers, ensuring consistent functionality across supported environments.
- Conducted backend data validation using **SQL** queries across **Oracle** and **PostgreSQL** databases, verifying end-to-end transaction accuracy for billing flows, pricing calculations, and usage metrics.
- Created and maintained custom logging and assertion utilities using **Log4j** and **Hamcrest**, enabling richer test diagnostics and simplified troubleshooting.

- Maintained and refactored automation suites to reduce execution time and improve stability eliminated redundant test cases, improved selector strategies, and documented framework usage for QA team onboarding.
- Collaborated with developers and scrum teams in **Agile** sprints to define test scenarios, estimate story complexity, and align coverage with Definition of Done.
- Provided regular training sessions and documentation for QA team members on automation best practices, framework usage, and defect reproduction techniques.
- Authored and maintained test artifacts including test plans, execution reports, and defect summaries to support compliance, audit readiness, and post-release retrospectives.

Environment: Java 11, Python (PyTest, Requests), Selenium WebDriver, JUnit, TestNG, JDBC, SOAP UI, REST Assured, Cucumber (BDD), Gherkin, Apache POI, Jenkins, HP Quality Center, JIRA, SQL (Oracle, PostgreSQL), Log4j, Hamcrest, Selenium Grid, Docker, Data-Driven Framework, Keyword-Driven Framework, Functional Testing, Regression Testing, API Testing, UAT, Agile, Windows, Linux, Chrome, Firefox, Edge
