

GOUTHAM KISHORE KRISHNAMOORTHY

Lead Full Stack Java Developer

Phone: 6823768423 | Email: gouthamkishore2711@gmail.com

PROFESSIONAL SUMMARY

- Over **8+ years** of experience as a **Java Full Stack Developer**, designing and delivering enterprise-scale web applications and backend systems across **E-commerce**, **Healthcare**, and **Financial Services** domains, serving millions of users.
- Managed the full **Software Development Life Cycle (SDLC)** from requirements gathering and system design through **development, integration, testing, deployment**, and production support within **Agile/Scrum** frameworks.
- Strong **collaborator** with **business stakeholders, product owners, and technical architects** to gather, clarify, and prioritize functional and non-functional requirements, translating them into scalable technical solutions.
- Led **Agile** ceremonies including **sprint planning, daily stand-ups, backlog grooming, retrospectives**, and **sprint demos**, ensuring predictable delivery and continuous team improvement.
- Deep expertise in **Core Java** concepts including **OOP, multithreading, collections, exception handling, generics, concurrency**, and **Java 8** functional programming (Streams, Lambdas, Functional Interfaces).
- Extensive hands-on experience with the **Spring ecosystem**, including **Spring Boot**, Spring MVC, Spring Cloud, Spring Security, Spring AOP, Spring Batch, and Spring IOC, building production-grade **microservices** architectures.
- Built responsive, interactive frontends using **HTML5, CSS3, JavaScript, TypeScript**, jQuery, Bootstrap, **Angular**, and **React** with **Redux** state management.
- Solid expertise in relational databases (**MySQL, PostgreSQL, Oracle, SQL Server**) with strong command of complex **SQL**, PL/SQL stored procedures, indexing strategies, and query performance tuning.
- Hands-on experience with **NoSQL** technologies including **MongoDB, Cassandra**, and **Redis** for high-volume transactional and semi-structured data workloads.
- Extensive experience designing, deploying, and managing applications on **AWS, Azure**, and **GCP**, ensuring scalability, high availability, and cloud security compliance.
- Proficient in building and maintaining **CI/CD pipelines** using **Jenkins**, with containerized deployments using **Docker** and **Kubernetes** (ECS, EKS, GKE, AKS).
- Strong background in designing **RESTful** and **GraphQL APIs**, implementing microservices and SOA-based architectures, and integrating SOAP/REST web services with OAuth, JWT, and API versioning.
- Skilled in event-driven microservices design using **Apache Kafka, JMS, RabbitMQ**, and **ActiveMQ**, including Kafka retry mechanisms for fault-tolerant, high-throughput messaging workflows.
- Deep familiarity with microservices design patterns including Singleton, Factory, Builder, DAO, **API Gateway, Circuit Breaker**, Saga, and **CQRS**.
- Experienced in **Angular** application development including components, services, dependency injection, **RxJS** observables, **NgRx** state management, and Angular CLI.
- Proficient in **React** development using functional components, hooks, Redux, React Router, and Material UI for scalable single-page applications.
- Hands-on **AWS** experience across EC2, S3, RDS, DynamoDB, Lambda, CloudWatch, IAM, KMS, SQS, SNS, API Gateway, ALB, ECS, and EKS.
- Proven expertise with **Azure** services including AKS, Azure SQL, Blob Storage, Key Vault, Azure AD, Service Bus, and Azure Pipelines.
- Strong **Test-Driven Development (TDD)** background using **JUnit**, Mockito, PowerMockito, Jasmine, Karma, Mocha, Chai, **Cucumber BDD**, and **Selenium** automation.
- Skilled in application monitoring and observability using **Dynatrace, AppDynamics, Splunk, Grafana, Prometheus**, and the **ELK Stack**.
- Proficient in **PL/SQL** development with stored procedures, triggers, functions, sequences, and query tuning for large-scale enterprise databases.
- Experienced in **Java Servlets**, JSP, and J2EE technologies for HTTP handling, session management, and backend service integration.
- Proficient in version control using **GitHub** and **GitLab**, including branching strategies, pull requests, code reviews, and release management.

- Proficient in build and dependency management using **Maven** and **Gradle**; working knowledge of **Python** scripting with Pandas and NumPy for automation and data processing.
- Mentored junior and mid-level engineers through code reviews, technical walkthroughs, and knowledge-sharing sessions, fostering a culture of engineering excellence.

TECHNICAL SKILLS

Programming Languages	Java, Python, Kotlin, SQL, PL/SQL
J2EE Technologies	JSP, Servlets, JDBC, JPA, JMS, RESTful Web Services, Microservices Architecture
Web Technologies	HTML5, CSS3, XML, XSLT, ReactJS, Angular, TypeScript, Node.js, jQuery, JavaScript, JSON, Redux
Frameworks	Spring Boot, Spring MVC, Spring Cloud, Spring Security, Spring Batch, Spring AOP, Hibernate, JUnit, Mockito, Bootstrap
Databases	Oracle, PostgreSQL, MySQL, MongoDB, Cassandra, DynamoDB, Redis, Elasticsearch
Cloud Platforms	AWS (EC2, S3, RDS, IAM, Lambda, SQS, SNS, KMS, CloudWatch, API Gateway, ECS, EKS), Azure (AKS, SQL, Blob, Key Vault, AD, Pipelines), GCP (GKE, Cloud Storage, Pub/Sub)
DevOps & CI/CD	Jenkins, Docker, Kubernetes, Maven, Gradle, SonarQube, Git, GitHub, GitLab, SVN
Message Brokers	Apache Kafka, JMS, RabbitMQ, ActiveMQ
Testing Tools	JUnit, Mockito, PowerMockito, TestNG, Jasmine, Karma, Mocha, Chai, Cucumber, Selenium, SoapUI, Postman, JMeter, LoadRunner
App/Web Servers	Apache Tomcat, Oracle WebLogic, IBM WebSphere, JBoss, Jetty, Apache Camel
Monitoring & Logging	Dynatrace, AppDynamics, Splunk, Grafana, Prometheus, ELK Stack, Kibana, Log4j
IDEs & Tools	IntelliJ IDEA, Eclipse, VS Code, NetBeans, STS, JIRA, Confluence, Swagger/OpenAPI
Methodology	Agile/Scrum, TDD, BDD, SDLC, Sprint Planning, Retrospectives

PROFESSIONAL EXPERIENCE

Lead Full Stack Java Developer

January 2025 - Present

Client: E-Commerce Marketplace Platform

- Designed and developed scalable backend services using **Java 8**, applying Streams, Lambda expressions, and functional programming paradigms to improve code readability and reduce processing latency by **20-25%**.
- Architected **Spring Boot**-based microservices supporting listing lifecycle management, seller onboarding, order tracking, and post-purchase operations across a high-volume distributed marketplace.
- Built and enhanced marketplace transaction workflows covering buyer checkout, seller order processing, dynamic pricing rules, and fulfillment integrations across distributed systems.
- Implemented **RESTful APIs** consumed by web and mobile applications, handling millions of daily marketplace requests with consistent sub-second response times.
- Integrated **Apache Kafka** for event-driven workflows processing order updates, listing changes, and seller activity events at scale, improving system decoupling and fault tolerance.
- Led data migration initiatives for seller profiles, listing metadata, pricing records, and historical order data from legacy platforms into modern microservices, reducing data inconsistency issues by over **30%**.
- Developed seller analytics services powering internal dashboards for operations and business teams tracking KPIs such as order volume, listing health, pricing effectiveness, and revenue trends in near real time.
- Improved analytics API response times by **40%** through optimized database queries, strategic indexing, and **Redis**-based caching layers.
- Integrated **MongoDB** for flexible storage of listing attributes, activity logs, and marketplace metadata alongside relational databases for transactional data, using **Hibernate** and **JPA** for the persistence layer.
- Implemented authentication and authorization using **Spring Security**, **OAuth2**, and **JWT** to secure APIs across sellers, buyers, and internal services, including LDAP, database, and pre-auth modes.

- Enhanced **Angular/TypeScript** frontend modules with reusable components and services; designed responsive UIs using CSS3 Flexbox and Grid for cross-browser consistency.
- Deployed services on **AWS** infrastructure (EC2, S3, RDS, Load Balancers, Auto Scaling Groups), configured **CloudWatch** monitoring and alerts, and implemented centralized logging via Log4j and Splunk, reducing root-cause analysis time by **35%**.
- Automated build and deployment pipelines using **Maven**, **Gradle**, **Docker**, and **Jenkins**, cutting manual deployment effort by **60%**.
- Conducted performance and load testing using **JMeter**; tuned application configurations, database queries, and caching strategies to improve system stability under peak marketplace traffic.
- Led a team of **6 Full Stack Developers**, providing technical direction, conducting code reviews, and mentoring engineers through design discussions and knowledge-sharing sessions.
- Collaborated with product owners, QA engineers, UX designers, and DevOps teams; provided technical leadership through design reviews and Agile sprint ceremonies including planning, stand-ups, grooming, and retrospectives.

Environment: Java 8, J2EE, Spring Boot, Spring MVC, Spring Batch, Spring IOC, Spring Core, Hibernate, AWS, Docker, Angular, TypeScript, ReactJS, Redux, HTML5, CSS3, JavaScript, Apache Kafka, MongoDB, Redis, Tomcat, Maven, Jenkins, JUnit, Mockito, Splunk, Git, JIRA

Software Developer II - Full Stack

January 2023 - December 2024

Client: Credit Card Platform

- Worked on the **Credit Card** platform supporting customer enrollment, transaction authorization, rewards processing, billing integrations, and payment validation workflows for millions of customers.
- Designed and enhanced backend services integrating Amazon Checkout systems, internal payment gateways, and external card network providers to enable secure, low-latency **payment processing** at scale.
- Developed scalable backend components capable of processing high-volume financial transactions, real-time risk validation, and event-driven payment workflows across distributed systems with idempotency guarantees.
- Implemented enterprise-grade security controls including **AWS KMS** encryption, **JWT** authentication, **Spring Security**, OAuth2, and IAM least-privilege policies to protect sensitive payment and customer data.
- Designed and implemented risk evaluation services analyzing transaction attributes and behavioral signals to improve authorization accuracy and reduce fraudulent activity.
- Architected **Spring Boot microservices** with independent deployment, horizontal scalability, fault isolation, and resilient inter-service communication via **Apache Kafka** producers and consumers with fault-tolerant delivery semantics.
- Integrated **AWS SQS** and **SNS** to decouple payment services and enable reliable asynchronous messaging and retry workflows; managed secrets and credentials via AWS Secrets Manager and Parameter Store.
- Deployed containerized workloads on **Amazon ECS/EKS**; configured CloudWatch alarms and dashboards for proactive incident detection; exposed backend services through AWS ALB and API Gateway.
- Built reusable **ReactJS** components for internal payment dashboards using **Redux** for state management and React Router for SPA navigation; leveraged **TypeScript** and Material UI for type safety and UI consistency.
- Developed lightweight **Node.js/Express.js** services for auxiliary workflows and API orchestration layers with JWT-secured endpoints.
- Implemented persistence layers using **JPA** and **Hibernate** with optimized entity mappings and indexing; designed **Redis** caching strategies to reduce database load and improve API response times.
- Worked extensively with **PostgreSQL** and **MongoDB**; designed schemas, indexes, and optimized queries; wrote complex **PL/SQL** procedures for reporting and reconciliation workflows.
- Integrated **Elasticsearch** to provide fast and efficient search across transaction and reporting datasets.
- Executed data migration initiatives for historical transaction data, billing records, rewards information, and audit logs with schema transformations, data backfills, and versioned database changes, maintaining **PCI compliance**.
- Built and maintained **CI/CD pipelines** using **Jenkins** with **SonarQube** integration for code quality and security scanning; conducted performance testing using **JMeter** to validate scalability under peak traffic.
- Provided technical leadership through code reviews, architecture discussions, and mentoring; authored technical design documents, API contracts, and operational runbooks.
- Participated in **Agile/Scrum** ceremonies and production support rotations, resolving critical incidents and ensuring high availability of customer-facing payment systems.

Environment: Java 8, Spring Boot, Spring MVC, Spring Batch, Spring AOP, Spring Cloud, Microservices, RESTful APIs, JPA, Hibernate, PostgreSQL, MongoDB, Redis, Elasticsearch, Apache Kafka, AWS (EC2, S3, RDS, IAM, CloudWatch, KMS, SQS, SNS, API Gateway, ALB, ECS, EKS), Docker, Jenkins, SonarQube, ReactJS, Redux, TypeScript, HTML5, CSS3, JavaScript, Node.js, Express.js, JUnit, Mockito, JMeter, Splunk, Git, JIRA

Java Full Stack Developer

September 2021 - December 2022

Client: Insurance & CRM Platform (Healthcare / Financial Services)

- Developed application features leveraging **Java 8** capabilities including Lambda expressions, Streams, Functional Interfaces, Time API, Collectors, and Default Methods for clean and efficient backend processing.
- Designed and implemented payment processing modules handling customer premium payments and refunds, integrating with third-party payment gateways to ensure secure and seamless financial transactions.
- Built **CRM** solutions to manage customer interactions, loyalty programs, and personalized services using **Apache Camel** and Spring Integration to connect CRM systems with reservation and ticketing platforms.
- Developed **Spring Boot microservices** using REST/JSON APIs, Spring Batch for sequential and conditional batch jobs, and Spring IOC for dependency injection via Application Context XML configuration.
- Implemented authentication and authorization using **Spring Security**, covering basic authentication, form-based login, and **OAuth2**, to protect web applications and APIs from unauthorized access.
- Enhanced legacy applications by building new **Angular/TypeScript** components with component-based architecture, Angular Guards for route-level authentication, and **NgRx** for state management.
- Implemented form validation in AngularJS and designed responsive UI components using **CSS3** Flexbox and Grid layouts for modern, cross-browser-compatible user experiences.
- Developed **RESTful APIs** using Spring Boot returning JSON and XML responses; designed and implemented JAX-RS web services tested via SoapUI and REST Client.
- Managed **AWS** infrastructure including EC2, S3, RDS, EBS, Elastic Load Balancers, and Auto Scaling Groups; created **CloudWatch** monitors, alarms, and notifications for proactive health monitoring.
- Designed and enforced AWS Security Groups as virtual firewalls to control inbound/outbound traffic for EC2 instances, ensuring compliance with industry regulations and protecting sensitive customer data.
- Integrated **Log4j** for centralized logging enabling effective application tracking; used **Splunk** for operational monitoring and root-cause analysis.
- Worked with **MongoDB** for non-relational data storage, wrote SQL queries and stored procedures for relational databases, and implemented persistence using **Hibernate** with JPA.
- Automated **Docker** image creation and deployment using Maven and Gradle build tools; used **Jenkins** for CI/CD and Git for version control and collaborative branch management.
- Executed automated acceptance tests using **Cucumber BDD** and wrote **JUnit** unit test cases and integration suites to maintain regression stability across releases.

Environment: Java 1.8, Spring Boot, Spring Batch, Spring MVC, Spring Security, Hibernate, AWS, Docker, Angular, TypeScript, HTML5, CSS3, JavaScript, JMS, MongoDB, SQL, PL/SQL, OAuth2, Log4j, JUnit, Mockito, Cucumber, Git, Maven, Gradle, Tomcat, Agile/Scrum, JIRA

Java Full Stack Developer

April 2019 - August 2021

Client: Electronic Health Records (EHR) Platform - Healthcare

- Maintained and enhanced **EHR** systems for secure storage, management, and retrieval of patient health information, collaborating with Health Plan vendors, CMS, and the IEHR Interoperable Electronic Health Record project.
- Implemented authentication using **Spring Security** with basic authentication, form-based login, and **OAuth2** to safeguard sensitive patient data and ensure regulatory compliance.
- Used **Spring IOC** for dynamic bean injection and **Spring AOP** to modularize cross-cutting concerns including logging, security, and transaction management.
- Built **Spring Boot microservices** as REST APIs and integrated inter-service communication using **Apache Kafka** for reliable, event-driven data exchange across healthcare modules.
- Applied service orchestration patterns including API Gateway, Service Discovery, and **Circuit Breaker** to manage microservices interactions and ensure resilience under failure scenarios.
- Deployed Spring Boot microservices on **GCP Kubernetes Engine (GKE)** using Docker containers for scalability and resilience; leveraged GCP Cloud Storage and Pub/Sub for data management and real-time messaging.
- Developed reusable **TypeScript** components and services in **React** with component-based architecture; implemented **Redux** for state management, React Router for client-side routing, and Material UI for styling.

- Built interactive dashboards using **ReactJS** with Flux, React forms, ag-grid for data grids, and custom HTML tags, enhancing rendering efficiency through Virtual DOM optimization.
- Designed responsive presentation layers using **Bootstrap**, **HTML5**, and CSS3 for cross-device compatible single-page applications (SPAs).
- Proficient in **Oracle**, **PostgreSQL**, and MS SQL Server; wrote complex SQL, PL/SQL stored procedures, functions, triggers, and cursors for efficient database operations.
- Migrated relational data from Oracle/PostgreSQL to **MongoDB**, leveraging its document-oriented model for flexible healthcare data storage; implemented MongoDB Transactions for ACID compliance in multi-document operations.
- Managed MongoDB concepts including indexing, sharding, replication, and schema design for scalable and efficient querying of unstructured healthcare data.
- Automated **Docker** image builds and pushes to private registries using Maven and Gradle; deployed to Apache Tomcat and managed environments using **Jenkins** for CI/CD.
- Participated in all SDLC phases from requirement gathering, analysis, and design through implementation, testing, and production support following **Agile** methodology.

***Environment:** Java 8, Spring Boot, Spring MVC, Spring Security, Spring IOC, Spring AOP, Hibernate, GCP (GKE, Cloud Storage, Pub/Sub), Docker, Kubernetes, ReactJS, Redux, TypeScript, Node.js, Express.js, Bootstrap, HTML5, CSS3, JavaScript, SQL, PL/SQL, Oracle, PostgreSQL, MongoDB, Apache Kafka, Jenkins, JUnit, Log4j, Tomcat, Agile/Scrum, Git*

Java Developer

January 2018 - March 2019

Client: Insurance Enterprise Applications

- Participated in all phases of the **SDLC** for multiple insurance projects, from requirement gathering and design through implementation, testing, and maintenance using **Agile** methodologies.
- Developed and maintained enterprise-level applications using **J2EE** technologies including Servlets, JSP, and JDBC for high-availability backend processing with efficient database communication.
- Designed and implemented **RESTful APIs** using JAX-RS and Jersey for core insurance business functions including policy underwriting, claims management, and billing within a service-oriented architecture (SOA).
- Leveraged **Spring Framework** modules including Spring MVC for the web layer, **Spring Security** for authentication and access control, and Spring Data JPA for streamlined database interactions.
- Optimized database interactions using **Hibernate ORM**, leveraging inheritance, lazy loading, dirty checking, optimistic locking, and transactions, reducing boilerplate and improving query performance in production environments.
- Managed **MySQL** and **PostgreSQL** databases, optimizing complex SQL queries; developed stored procedures, functions, triggers, and cursors for insurance reporting workflows.
- Enhanced API security with **OAuth** and improved API robustness with version control, standardized error handling, and rate limiting mechanisms.
- Leveraged **JMS** Transactions to ensure reliable message delivery and prevent duplicate processing in critical insurance workflows; optimized JMS message processing to improve throughput and reduce latency.
- Developed dynamic and reusable **AngularJS** components mapped to JSON data for rendering personalized, responsive customer-facing content; built client-side MVC applications using Bootstrap.
- Used **MongoDB** for non-relational data management, applying locking, indexing, sharding, replication, and schema design for scalable data storage.
- Deployed EJBs, Servlets, and JSPs on **IBM WebSphere** and **Oracle WebLogic** Server; configured WebLogic profiles for reliable Java application deployment.
- Used **Log4j** for application debugging; wrote and executed **JUnit** test cases and used Mockito to mock dependencies for comprehensive test coverage and component isolation.
- Managed version control and collaborative development using **Git**, ensuring codebase integrity during multi-team insurance application development lifecycles.
- Actively participated in **Scrum** ceremonies and used **JIRA** for project tracking, progress reporting, and sprint management.

***Environment:** Java, J2EE, Spring MVC, Spring Data JPA, Spring Security, Hibernate, JSP, Servlets, JDBC, JAX-RS, Jersey, RESTful APIs, AngularJS, Bootstrap, JavaScript, JSON, MySQL, PostgreSQL, MongoDB, JMS, Log4j, JUnit, Mockito, Git, GitHub, Maven, Oracle WebLogic, IBM WebSphere, IntelliJ IDEA, Agile/Scrum*
